Appendix	146
Summary	151

Acknowledgements

This PhD dissertation has benefited greatly from the help and support of many people and institutions, to which I owe my deepest gratitude and appreciation.

Above all, I want to extend my sincere thanks to all the people with whom I worked during my fieldwork at Hvidovre Hospital and at hospitals in Gansu Province in China. In particular, I am most grateful to the doctors, nurses, administrative staff, and the patients and their families at Baiyin Hospital, who accommodated me with kindness and patience over the course of my fieldwork. Unhesitatingly and wholeheartedly, they invited me in to follow their daily lives in clinical practice, tolerated my presence and many questions, and invited me into their homes or out for dinners, thereby making my fieldwork pleasant and enjoyable, full of friendship, fun and unforgettable moments. Whereas I cannot fully express my appreciation to each and every one of them here, I would like to thank in particular Hu Jie Liang, Gao Zhen Hua, Ding Hong, Li Fang Li, Pu Chang Song, Qian Hong Liang and Ding Ya Ping. I am also deeply grateful for the support I received from Jia Zong and Christina Chuck.

My most deeply felt thanks go to Torben Mogensen, the former Vice-Director of Amager and Hvidovre Hospital, who invited me into the collaboration between Hvidovre and Gansu in 2013, supported me in digging deeper when I felt an urge to do so, and finally approved this PhD project in 2015 and arranged the funding and institutional affiliations for it. Torben's on-going engagements in Gansu Province since 2009 have paved the way for my own research all along, easing my access to field sites and informants.

In Professor Ayo Wahlberg, I found an invaluable principal supervisor who sharpened my thinking and pushed this project forward in ways that were most exciting and challenging to me. It has been the greatest privilege to get to know anthropology through Ayo, who has been an incredible inspiration in introducing me to the difficult, but stupendous discipline of conceptualizing new theoretical and methodological ideas. I am most grateful for Ayo's patience at times when I suffered creative blocks and was struggling to find my way across the empirical and theoretical landscapes of my project, as well as for his unfailingly constructive readings of my writings.

I also wish to thank my co-supervisor, Ove Andersen, for his inexhaustible optimism and support right up to the very end of my PhD. Ove never doubted my work or abilities, and for that I am profoundly

grateful. As Ove decided to venture outside the Clinical Research Centre at Hvidovre Hospital for a while, I had the immense pleasure of having Janne Petersen as part of the supervising team. I then benefited not only from Janne's intelligent questions and comments, but also from her caring personality, always extending a hand to help.

This study could not have been undertaken without the assistance of Lea Parmark, Linda Andresen and Henriette Møller, who have attended to a myriad of logistical, juridical and financial concerns during my years of study. I thank all my colleagues at the Clinical Research Centre for an amazing time.

I am deeply appreciative of the academic environment at the Department of Anthropology, where I have found great inspiration in the Health and Life Conditions group, Technology and Political Economy group, Center for Healthy Aging and Vital Jams. My deep-felt thanks go to my PhD colleague, Marie Kofod Svensson, for our friendship through the ups and downs of PhD life, and not least for her always detailed comments on my writings.

In the autumn semester of 2017, I visited Nancy Chen, Professor of Anthropology, at the University of California at Santa Cruz. I have appreciated Professor Chen's rich insights and expertise in the field of medical anthropology and China, and I have felt most lucky to have received insights from her inexhaustible generosity and intelligent mind.

This project has benefitted considerably from the help of several Chinese and Danish assistants. I have had the pleasure and benefit of working closely together with Wang Shuangshuang, who has been of vital support in transcribing and translating parts of my Chinese material. I also want to thank Bin Bin Gong, Sun Hu Li and Qian Li for their help with small parts of my Chinese material and Caroline Sohn Christensen for her great efforts in transcribing my Danish material.

I acknowledge with thanks the Capital Region of Copenhagen, the Clinical Research Centre at Amager and Hvidovre Hospital, the Laurits Andersen Foundation and the Asian Dynamic Initiative Foundation, whose funding made it possible to carry out this study.

And lastly, warmhearted thanks to my family and friends for their unwavering support and encouragement. I owe my greatest debt of gratitude to my husband Horacio Emmanuel and my daughter Nora. Your love, cheerfulness and kindness remind me every day what matters most of all.
