CONTENTS

FOREWORD TO THE ENGLISH VERSION	15
Use.....	15
Foundation and background	15
Research papers, BA theses and essays.....	15
Examples from good papers from professional bachelor and master programmes.	15
Collaboration with research libraries.....	16
Activity book.....	16
Contact the authors	16
READING GUIDE	17
1. GOOD PAPERS IN HIGHER EDUCATION – GENRES AND QUALITY	
CRITERIA	19
The research paper as a genre	19
The research genre investigates a subject-specific problem	21
The research paper meets scientific and scholarly requirements	22
Research means bringing factors into play	22
The research text is hierarchical	23
Research is both the knowledge and the inquiry of the field	24
Academic speech acts	24
Requirements and qualities of the good paper in higher education	26
Avoid common misconceptions of what constitutes a good paper	27
Other types of papers and genres you will have to write as a student	28
Other types of papers: Popularising papers, practice papers, tests	30
The foundation of your research – the paper's pentagon	30
What can be included in the pentagon's corners?	31
Examples of good papers in the pentagon model	32
Use the pentagon	39
The good paper's quality criteria	39
A teacher's comments on a paper	39
Rhetoric of science	40
1. In the good paper, the writer is professional and displays independence	41
2. The good paper <i>uses</i> the field's knowledge and tools	42
3. The good paper is focused	44

4. The good paper is “written” on the top of the taxonomies of educational objectives.	45
5. The good paper is an argument	49
6. The good paper is critical of its own material, its field and of itself	49
7. The good paper communicates on a meta level	49
8. The good paper meets the curriculum’s parameters	50
Examples of qualities in bachelor theses	51
Nuances?	59
The different purposes and ideals of the Anglo-American and Continental research traditions	60
Advice to students writing in the Continental tradition	63
2. WRITING PROCESSES OF RESEARCH PAPERS	65
Choice of topic	65
Your interest in the topic	65
The useful topic	66
The good topic	66
Theoretical, abstract or concrete topics?	67
After choosing a topic, the first thing you should do is write	67
You have started writing, yes, but what?	67
Write before and while you read	68
Write backwards – start with the conclusion	69
Begin with the central aspects	70
Put off in depth studies of theory and history, summaries and descriptions	70
Be flexible when writing	71
Introductory writing is writing to think	73
The techniques of writing to think	73
Brainstorming	74
Mind mapping	74
Non-stop writing	76
Broad writing	76
Display (visual representations) i.e. drawing the central content of your paper	76
Why write to think?	78
From writing to think to drafts to finished papers	79
Writing with or without an outline	79
The texts of the writing process: Notes, drafts and finished text	80
Should you write with a reader in mind?	82
Revising a text	82
Take a break	83
Revise on paper	83

Criteria for revision	84
From writer based to reader oriented revision	86
Get feedback	86
Know your supervisor's criteria	86
The process of project planning	87
Use calendars and schedules	88
Plan backwards from your deadline	88
Logbook	90
Reading for papers	90
Experiment!	90
3. SMALLER HOMEWORK ASSIGNMENTS, ONE-WEEK ASSIGNMENTS, SET EXAMS – ESSAYS	91
What is the purpose of essays in the first year of study?	91
Quality criteria	92
Restrictions and possibilities: What are you <i>required</i> to do and what would be wise to do?	94
Progression and independence	96
If you are set an assignment question	97
Introducing your paper: What should you include?	98
Structure and presentation	99
The writing process – if you only have six hours, three days or a week	102
4. FORMULATING A RESEARCH QUESTION: FROM TOPIC TO FOCUS AND QUESTION	105
Definitions: “Problem” and other problem related words	106
Other words for research question	108
Must there be an actual problem (and for whom) to write a research paper?	109
How do you formulate a research question?	111
Research questions in “hard” and “soft” disciplines	111
A question?	112
A good research question helps you to write the good paper	112
The process: From topic to research question	115
How to move from topic to research question	116
Formulate your research question on the basis of the answer	119
An observation	120
Use wh-words	120
Fill out a template	121
Be inspired	122
1. The research questions guides the paper's pentagon	122

2. Formulate a research question that is knowledge-transforming according to the taxonomies for learning goals	122
What-, why- or how-questions	123
What	123
Why	124
Commentary:	124
How	125
3. The research question governs the paper as an argument	125
4. The research question's broadness vs. narrowness	126
The research question guides the paper's delimitation	128
5. The research question's main question must be apparent	129
Divide into main question and necessary working questions	130
6. The research question must be precise	131
Vagueness	131
Watch out for plural terms and broad concepts	132
Watch out for the absence of actors and sources	132
Using the words and terms of the field	132
7. Consciously use open/closed questions in the research question	134
What is a poor research question?	136
Supervision and formulating research questions	137
Keep you supervisor informed	137
Get input from your supervisor and fellow students/others	137
A good research question is no guarantee	138
Unanswered questions and unfinished research questions	139
5. LITERATURE AND INFORMATION SEARCH FOR YOUR PAPER	141
Basic knowledge of searching for and handling information	142
The parameters of literature searches for papers	142
How much literature should you read?	143
Time frame for the literature search	143
Too broad for a narrow search – before and after formulating your research question	144
Preliminary searches and reading	144
Your paper's relationship to the literature on the topic	145
Literature and information searches on the basis of a (filled out) pentagon	146
Are there "literature gaps" in the pentagon?	147
Planning your literature search	147
How to search for literature – search methods.....	148
Chain search	148
Systematic literature search	149
Random literature search	150

Articles and other material	150
Too much and not enough literature	151
Too much literature – specify your search terms	151
If there is no literature?	151
Is it okay to pretend that some literature does not exist?	152
Search terms for literature searches for papers	152
Documenting your literature and information search	154
Check you literature search:	155
Evaluating literature – source criticism	157
Your supervisor and literature and information searches	159
Resources for literature and information searches	160
Courses at research and university libraries	160
Web tutorials	160
Contact the information specialist	160
Web resources	160
6. READING AND TAKING NOTES FOR YOUR PAPER	163
Curricular reading and reading for your paper require different reading and note-taking strategies	163
Reading and writing go hand in hand	164
Reading for papers	164
Ways of reading	165
Skimming – reading to gain an overview of the topic	165
Selective reading – goal-oriented reading for writing papers	166
A concluding remark on reading	168
Taking notes for your paper	168
Notes for the paper: Files	169
How should you store notes?	169
Highlighting and referential notes	170
Processed notes	171
Notes for contextualising	171
7. SOURCES IN YOUR PAPER	173
Sources' functions in and for the paper	173
Applied sources	174
The professionalism and scholarliness of sources	175
Why use secondary sources?	175
Using secondary sources in papers – which and how	176
How many sources?	178
Which parts of a source can you use?	179

The research question as a guiding principle and benchmark for handling sources	179
Where are different sources placed in the pentagon?	179
When and how should you refer to secondary sources in your text?	180
Source qualification, source argumentation, source discussion and source criticism	181
Your use of sources in your paper	182
Qualify secondary sources	182
Source argumentation	185
Discussing sources	186
Source criticism	188
How should you represent sources?	191
Quotes	192
Quotation technique	194
Paraphrasing and summarising	194
How to reference sources	195
Which sources must be referenced?	197
Distance to sources	199
Contagion and plagiarism	201
References	201
Be consistent	202
Referencing books	202
Referencing journals	203
Referencing articles in books or journals	203
Internet source	203
Brochures etc.	204
Other material	204
If information is missing	204
Other sources	205
Other resources on using sources and referencing	206
8. DATA IN THE PAPER	207
Qualitative and quantitative data	208
Before choosing data: Research question and supervisor	209
Always prepare collection carefully	210
Presenting data in your paper's introduction	215
Including data as documentation in your paper	215
Data can be discussed in sections on method criticism, discussion and conclusion	217
Collecting and using human data	218
References	221

9. THEORY, CONCEPTS, METHODS AND RESEARCH DESIGN (= THE METHOD OF YOUR RESEARCH)	223
Theories in your paper	225
Concepts are often drawn from theories	225
Problems with a paper's theory	227
Too much or too little theory	227
Choice of theory for research papers	227
How to find theories	230
Outdated theories	231
Theory section	232
Method and method section	233
Turning a theory into method (analytic tool)	237
Where in the paper do you write about theory and method?	238
Introduce theory in the introduction or theory section	239
Where in your paper should you present critique of theory and methods?	240
Discussion, evaluation and critique of theory	240
Discussion, evaluation and criticism of methods: research method	244
The paper's research design, the procedure	249
From research question to theory and method and research design – in a linguistic sense	250
Use your supervisor for selection, use, qualification, discussion and criticism of theory and method	252
10. THE PAPER'S STRUCTURE AND ELEMENTS	253
When and how to structure	253
Use the research question as a structural guideline	256
Structure is determined by genre	256
The structure contains elements of the argumentation	262
General – concrete – general, up-down-up	264
End your paper at an upper, general level	266
Consider your paper from a bird's eye view – 3 activities	267
The structuring process takes place throughout the entire writing process	268
Structuring problems	268
Text types – the building blocks of the academic text	269
Defining sections	270
Summarising and paraphrasing paragraphs	271
Descriptive, characterising paragraphs	272
Narrative and descriptive paragraphs	272
Comparative, juxtaposing paragraphs	273
Analysing and interpreting paragraphs	274
Discussion sections	276

“What do you think?”	279
Reflecting sections	279
Evaluating sections	280
Design and perspective paragraphs	280
Introduction.....	281
The introduction as a template	282
The introduction reflects the entire paper	285
Choice of topic, problem definition, motivation and research question	286
Hypotheses	287
The paper’s purpose	288
Point of view	288
Method	288
Theory(ies)	289
Concept definitions	289
Data	289
Delimitation	289
The paper’s research design and structure	290
Introduce your project, not your reservations.	290
Conclusion	291
The conclusion must relate to the research question	291
Write your conclusion as you go	292
Perspective	293
The paper’s formal sections	293
Front page	294
Use headings to demonstrate the structure	295
Appendices	296
Notes, note sections and references in the text	297
Abstract	298
11. THE PAPER’S ARGUMENTATION	299
Argumentation in papers and other genres	299
Argumentation in research papers	300
Argumentation forms part of the unfinished disciplinary debate	304
What should your paper argue for?	305
Your paper as a cohesive argument	305
Disciplinary context	307
Conclusion	308
Conclusions in papers do not have to be long	308
The perspective contains points about the literature and your own research ..	309
Documentation	310
What can you use as documentation – and for what?	311
